THICK ETCH

Sketch Textile Series

Product Description

Thick Etch is a laminated textile glass developed from the Etch Sketch concept through a deeper and more pronounced etching process. The sketch motif is enlarged and chemically etched into the textile, removing a greater amount of fibers and creating thicker, more open lines across the surface. The increased fiber removal allows significantly more light to pass through the etched zones, producing a lighter and more translucent architectural material. The remaining textile structure continues to diffuse light, creating a balanced interaction between open areas and soft textile density. From a distance, the surface reads as clear and structured. At closer range, the textile fibers, etched edges, and variations in transparency become visible, revealing the expressive gesture of the hand-drawn motif preserved within the glass. Thick Etch creates a dynamic architectural surface that combines openness, light transmission, and material depth.

Material & Construction

- Laminated textile glass
- Textile layer: chemically etched cotton textile
- Enlarged sketch motif created through deeper fiber removal
- Etched textile structure preserved within laminated glass
- Visible textile fibers embedded within the laminate
- Double-sided visual depth through textile structure and etched zones

Technical Information

- **Thickness options:** 8 / 10 / 12 / 16 mm
- **Maximum panel size:** up to 2000 × 3000 mm
- **Processing:** CNC cutting, edge polishing, custom formats
- **Safety:** laminated; tempered laminated on request

Applications

Space partitions · Sliding panels · Interior walls

Customization

Sketch scale, textile type, etching density, panel dimensions, and transparency levels can be adapted according to architectural project requirements.

Maintenance

Clean with standard glass cleaner and a soft cloth. Avoid abrasive materials.
